

GPU idle for 670.43 of 965.50 seconds

Total time grouped by GPU state, not event order. Profiling overhead is included.

Recorded CPU operations

Flame-graph width is total elapsed time across calls. Children appear below their parent. Horizontal position is not query time.
Orange: scheduler methods. Blue: PyTorch and CUDA API operations on the CPU. Gray: thread interval or unrecorded time.
Unrecorded CPU time is not CPU idle time. Open [bio3_join_profile.html](#) to inspect functions and their concurrent GPU activity.
