LFM2 2.6B bf16, sf 0.1, one H100 per engine

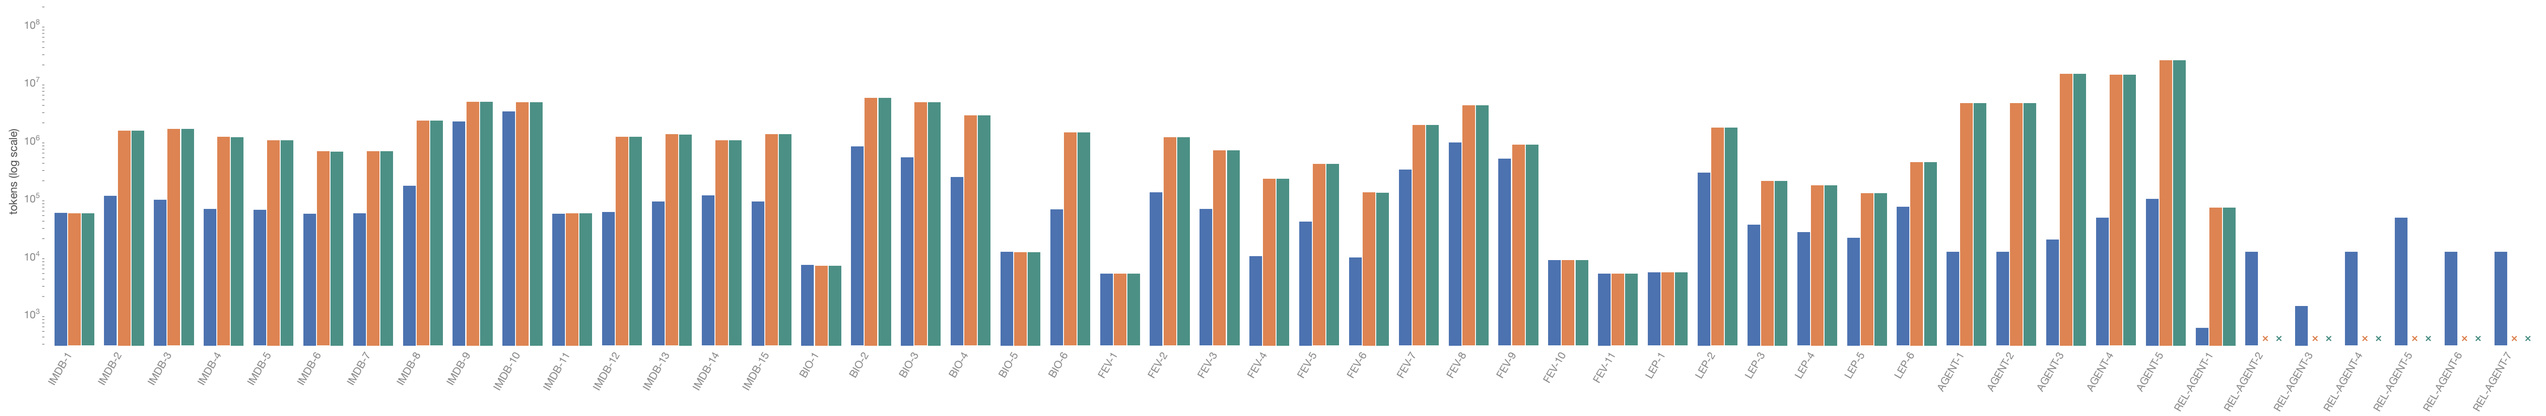

Quail | Stock vLLM (operator-at-a-time) | Pipelined vLLM | SoL estimate

Latency: query time with planning, without model startup; fastest vLLM time over Quail time, then SoL seconds, above each query

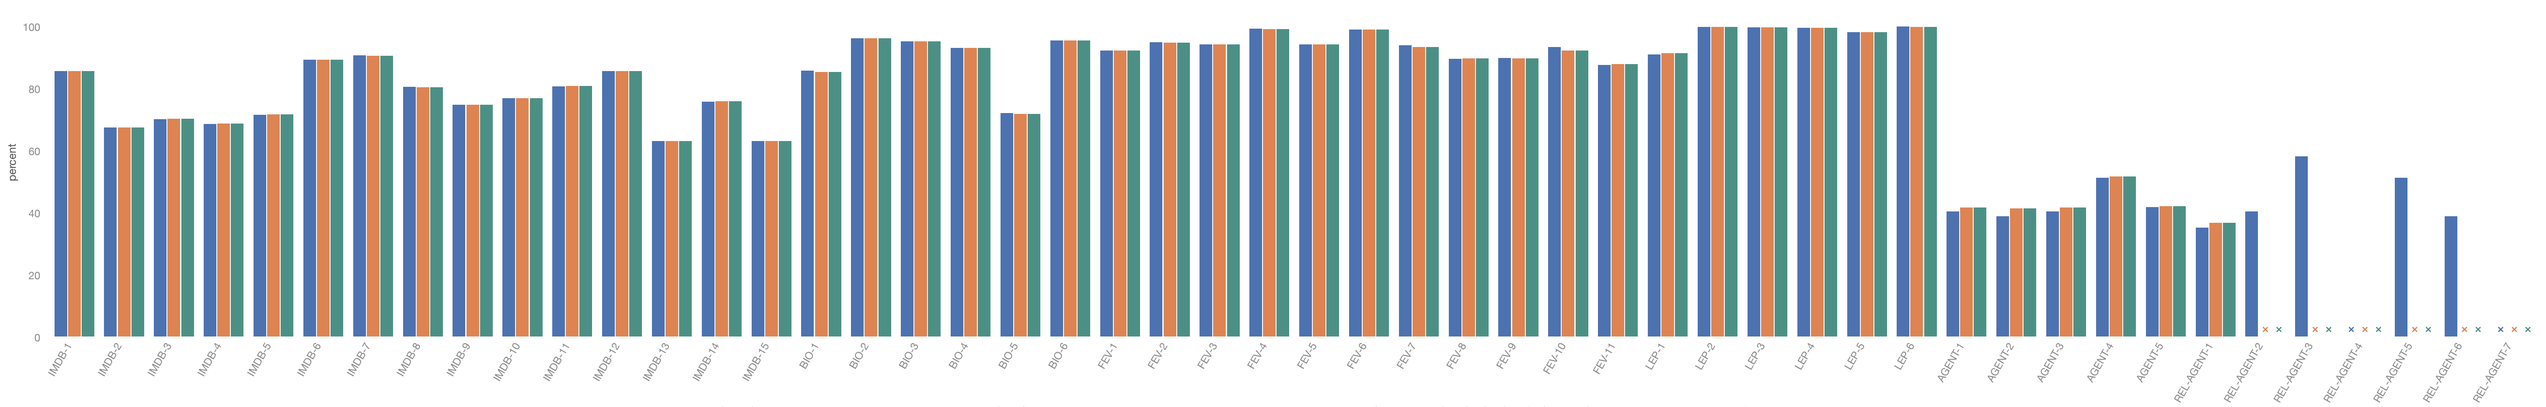

Throughput: every prompt's full input length over query time

KV regret: fresh tokens minus the token minimum (SoL is 0 by definition)

Accuracy: agreement with saved reference labels (qwen3-32b-fp8; no SoL accuracy)

Quail: Oct 13 rerun at 82d8c518 with FlashInfer; vLLM and SoL: Oct 12 sweep. A dash marks zero; an x marks a missing value (vLLM skips ORDER BY, DISTINCT, OFFSET, GROUP BY; SoL does not price score columns).
